Cut and paste the corresponding layer information to the right card. Students can use these to review the different layers of the earth, and what they are made up of.

### **The Inner Core**

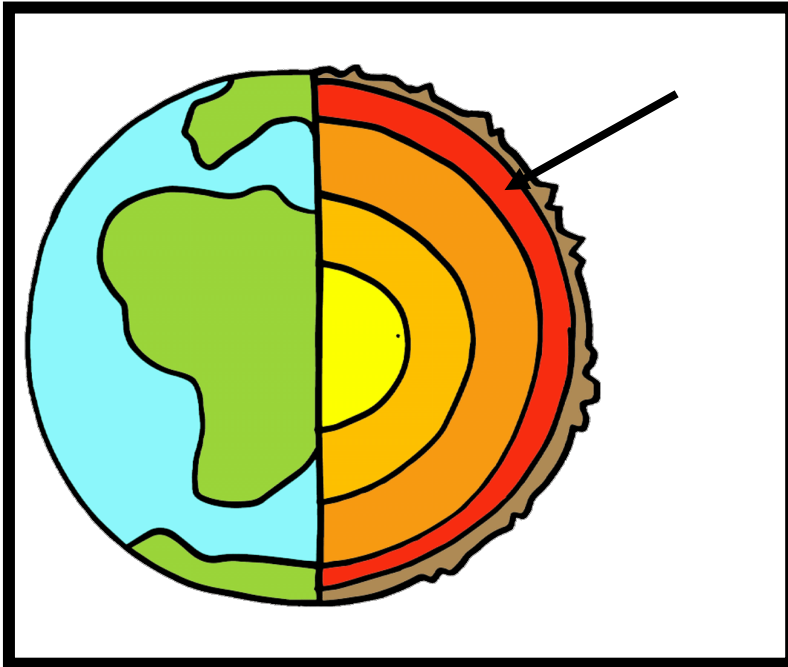

This is the hottest layer of the Earth, as well as the smallest. It is comprised of a solid ball of metal.

### **The Outer Core**

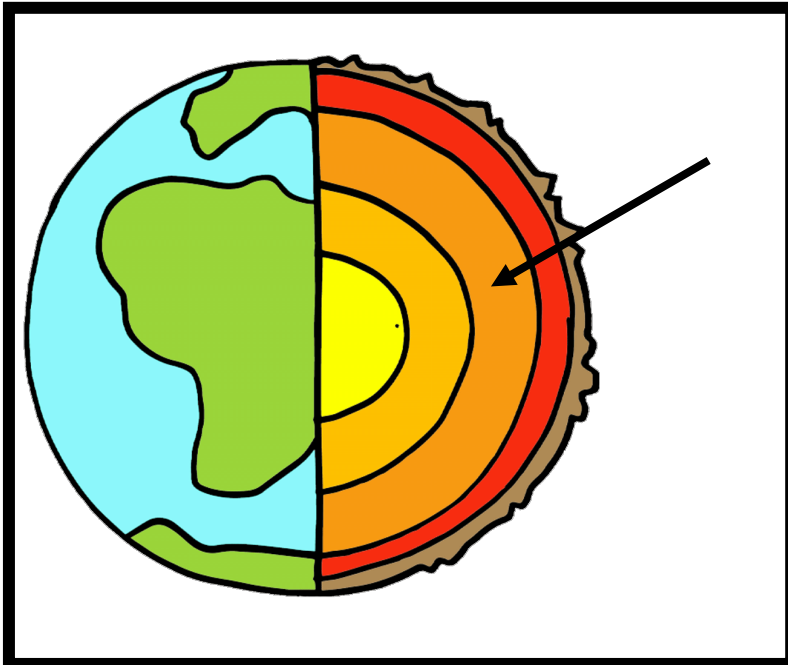

Comprised of liquid magma. Extremely hot because of its closeness to the inner core.

Cut and paste the corresponding layer information to the right card. Students can use these to review the different layers of the earth, and what they are made up of.

### The Crust

The outer layer of the Earth. It is comprised mostly of different types of rock.

### The Mantle

This layer is made up of two separate layers. The top of these two is made up of solid rock. The second is made of a plastic like fluid.
